

Car Seat Safety Checklist

- Ensure that the seat is in usable condition (Buckles function and 'CLICK' into place, shell has no signs of cracks, harnesses and seatbelts are not frayed).
- Install the car seat correctly (Tether strap is secure, seat is installed firmly with little movement).
- Check that harnesses and seatbelt straps are not twisted.
- If you have an adjustable headrest, check that it is positioned correctly, just above the child's shoulders.
- For applicable forward facing seats, recline as much as the seat allows so children can nap comfortably.
- If you are travelling long distances, plan your rest stops ahead of time.
- Secure any loose objects in the car and boot which could be dangerous in an accident.
